

The Subaru Select Monitor III is now available for the aftermarket in the exact same functionality as the Hitachi Diagnostic System HDS 3000 for all Subaru and Saab 9.2 cars

The HDS 3000 is a powerful fault diagnosis and reprogramming device that has been developed utilizing the latest advanced technology. Used in combination with a PC, it provides an interactive user interface that is simple to operate and offers a variety of customizable display functions. High-speed communication with the engine control system and transmission control system make diagnosis and reprogramming tasks faster and easier than ever before.

KIT INCLUDES

- Interface Box
- Diagnostic software and tool firmware
